## Considering the Needs and Wants of the Community

You will use this needs and wants chart to help you begin to craft a community action plan to help protect as many community members as possible. When crafting any plan, it is important to consider the criteria (that describe the goal) and the constraints (that describe our design limitations).

Our criteria	Our constraints
<ul style="list-style-type: none"><li>• <i>Minimize each community member's risk of getting infected with COVID-19.</i></li><li>• <i>Minimize each community member's likelihood of spreading the COVID-19 virus to others.</i></li></ul>	<ul style="list-style-type: none"><li>• <i>People who work in the public as essential workers cannot stay home.</i></li><li>• <i>There are no perfect methods to stop the transmission of the COVID-19 virus.</i></li><li>• <i>People do not like change or being told what to do.</i></li><li>• <i>Not all people will follow all or some of the methods.</i></li></ul>

After choosing a character card, read the "What has changed?" and the "Job" sections to help you determine the character's wants and needs. Then share and combine your rest of your group's characters' wants and needs.

Your character's wants	Your character's needs
Group wants	Group needs

### Creating the community action plan

It is impossible to create a community action plan that considers every individual's wants and needs in a community and communities cannot implement everything at once. Use the criteria and constraints, your group's wants and needs, and the Swiss Cheese Model to select the **four methods** the community should implement to slow the spread of the virus. Record your selected methods below and briefly explain why you chose that method.
